

BREAK Statements

Programming and Algorithms

Lecture by
Dr Daniil Osudin

```
n = 3  
for i in range(1,n+1):  
    print("Hello World!")
```

Hello World!
Hello World!
Hello World!

What will we Cover?

- BREAK statements
- Use numeric and Boolean data types

BREAK Statements

- Can be used to break out of a loop, `for` or `while`
- Terminate a loop depending on a criteria provided by the user

Example

Nasima will keep driving along the road A. If there is a stop sign or a red signal, she will stop the car.

BREAK Statements in Python

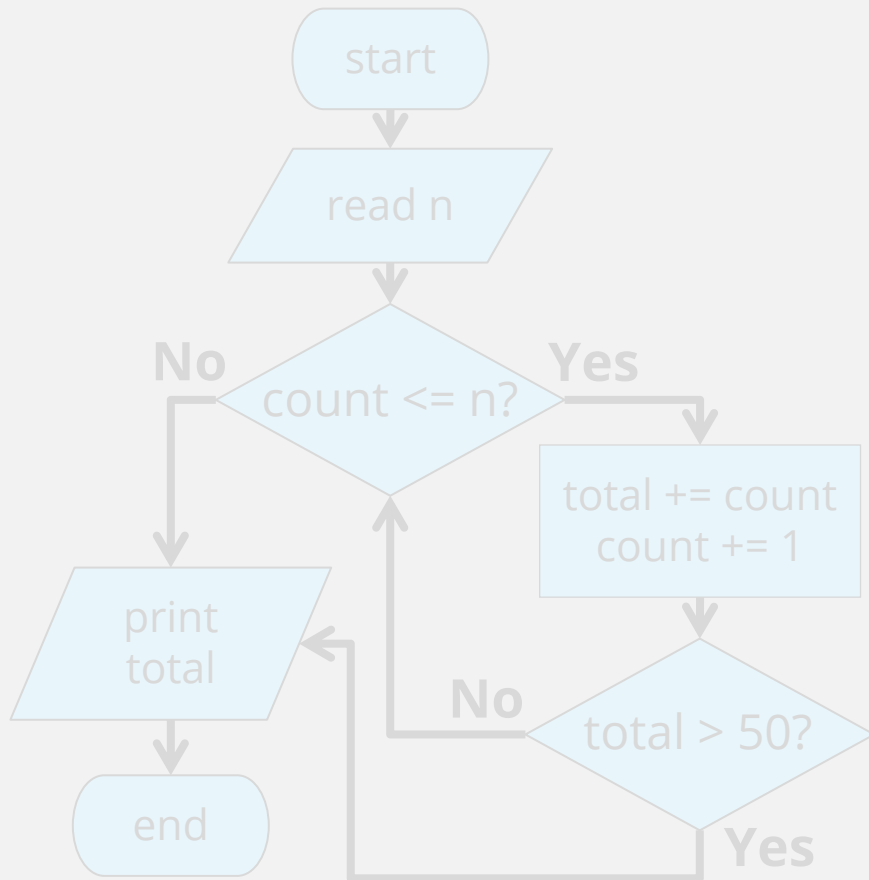

Could be used with
`while` and `for` loops

```
while <condition>:  
    body(if <condition>:  
        break)
```

Extra indentation for the
`break` statement

`break` statement is
written as part of the
body of an `if` statement

BREAK Statement Flow Chart

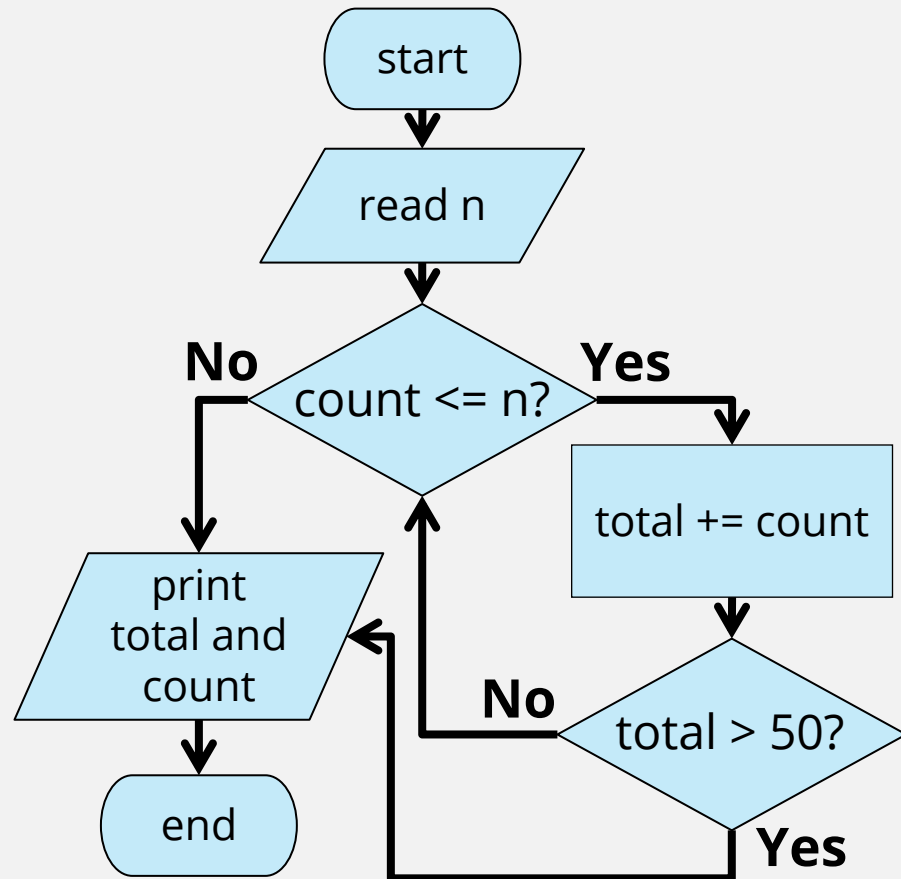

```
n = int(input("enter n: "))
total = 0
```

```
for count in range(1, n+1):
    total += count
    if total > 50:
        break
print("the total is", total)
print("the count is", count)
```

Condition
for break

BREAK Statement Flow Chart

```
n = int(input("enter n: "))
total = 0
```

```
for count in range(1, n+1):
    total += count
    if total > 50:
        break
print("the total is", total)
print("the count is", count)
```

Condition for break

Examples

```
n = int(input("enter n: "))  
total = 0
```

```
for count in range(1, n+1):  
    total += count  
    if total > 50:  
        break  
print("the total is", total)  
print("the count is", count)
```

Count when the
loop execution
stops

Condition
for break

```
enter n: 20  
the total is 55  
the count is 10
```

Examples

input is part of
the body of the
while loop

```
total = 0
while 1==1:
    n = int(input("enter n: "))
    if n <= 0:
        break
    total += n
print("the total is", total)
```

Condition is
always true

```
enter n: 5
enter n: 6
enter n: 1
enter n: 0
the total is 12
```

Input is entered at
every iteration of
the loop

Try It Yourself

Write a program in Python environment that prints “Hello world!” **x** times, but a maximum of 5 times, even if **x** is greater
